Aliz is a Big Data and Machine Learning specialized Google Partner. They build and provide solutions that help companies gain valuable insights into their business, predict the future, and optimize processes.

They were named Google Breakthrough Partner in 2019.

TECH SKILLS THEY
VALUE MOST

Before using DevSkiller, Aliz used to send take-home tests without a strict deadline. This was followed by a technical overview.

THE BIGGEST CHALLENGE

Candidates dropping out of the pipeline at several stages, especially at the technical screening stage

Aliz hasn't fully overcome this challenge yet but already sees great improvement.

RESULTS

"With DevSkiller, we see a 50% increase in candidates staying in the pipeline at the screening stage. The automated correction of tasks is a game-changer for us."

VIVIEN SZALAI, RECRUITER AT ALIZ

alizi

"Having a strict deadline is great because it's easier to manage and oversee the pipeline. Also, less time is needed on our side to evaluate the solutions submitted.", says Vivien.

"Candidates find the tests difficult because of the time limit but DevSkiller has proved to be UI friendly to use. We are very satisfied with the results. We can often save around one week of hiring time with DevSkiller, but it usually depends on the candidates' availability."
